

*Amendment of Claims and Remarks
Patent Application 09/714,789
Inventor: Gary Robinson*

In the specification:

Please replace the paragraph at page 11, lines 25-30, with the following:

In preferred embodiments, the user can create a new cluster as the proposed destination. It would then be initially populated with the songs he selects, if doing so increases the quality of the clustering. Many such embodiments provide a user interface whereby the user can enter songs to populate the new cluster with, without regard to ~~there~~their original clusters. In most such embodiments, the administrator can set an upper limit on the number of clusters that may be created in this way.
